

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

REPORT.

TO THE MOST HON.
THE MARQUESS OF LOTHIAN, K.T.,
Her Majesty's Secretary for Scotland.

GENERAL REGISTRY OFFICE OF BIRTHS, Etc.,
EDINBURGH, 20th December 1889.

MY LORD,

I had the honour in 1888, in conformity with the requirements of the seventh section of the Scottish Registration Act, 17 and 18 Vict. cap. 80, to transmit to you as Her Majesty's Secretary for Scotland, General Abstracts of the Births, Deaths, and Marriages registered in Scotland during the year 1887, along with the usual explanation and commentary.

At the same time, my Twenty-third Annual Report on Vaccination was transmitted, in accordance with the nineteenth section of the Scottish Vaccination Act, 26 and 27 Vict. cap. 108.

I have now the honour to transmit the Detailed Annual Report, together with the relative Tables, regarding the Births, Deaths, and Marriages registered in Scotland during the same year (1887).

I have the honour to be,

MY LORD,

Your most obedient Servant,

STAIR AGNEW,
Registrar-General.

REPORT TO THE REGISTRAR-GENERAL,

BY R. J. BLAIR CUNYNGHAME, M.D., F.R.S.E.

SIR,

In presenting this Report upon Births, Deaths, and Marriages registered throughout Scotland during 1887, I would premise my remarks by simply noting, as bearing upon the condition of the inhabitants, that there was a deficiency of rainfall throughout the year, as also of southerly and easterly winds, while the hours of sunshine during the spring and summer months were considerably in excess of those for the like period during 1886.

TABLE I.—Population estimated to the middle of each year; with the Number of Births, Deaths, and Marriages registered in Scotland during each of the Years 1855 to 1887, and their Proportion to the Population; also the Excess of Births over Deaths, the Illegitimate Births, and their Proportion to the Total Births.

YEARS	Estimated Population.	BIRTHS.		Deaths.	Marriages.	Excess of Births over Deaths.	Percentage to Population.			Percent. of Illegit. to Total Births.
		Total.	Illegit.				Births.	Deaths.	Marriages.

Principal Towns above 25000 inhabitants. Large Towns above 10000 and under 25000 inhabitants. The Small Towns from 3000 to 10000 inhabitants from 1855 to 1871—but from 1871 and upwards the Small Towns have from 2000 to 10000 of population.

This population is distributed as follows:—The whole country being divided into five great registration districts. In the Principal Town Districts the sexes together are estimated at 1,562,427, of these, 744,549 being males, and 817,878 females; in the Large Town Districts the total is 445,206, the males 218,431, the females 226,775; the Small Town Districts have a gross population of 843,668, the males being estimated at 409,114, the females at 434,554; in the Mainland-Rural Districts both sexes number 1,010,798, the males alone 500,856, the females 509,942; the Insular-Rural Districts having a total population of 129,400, males 61,265, females 68,135.

BIRTHS.

124,418 Births were registered throughout Scotland during 1887, a less number than those in the previous year by 3,472, giving a birth-rate for the country of 3·12 per cent., or 312 births in every ten thousand of the estimated population, the lowest rate that has been reported since the first returns made after the coming into force of the Registration Act. The mean birth-rate for the last ten years, 1877 to 1886, is 3·35 per cent.

TABLE IV.—Percentage of Births, Deaths, and Marriages in the Five Groups of Districts of Scotland, to the Population during each of the Years 1855–1887.

indicating a birth-rate of 3·25 per cent.; the mean for the last ten years 1877-1886 being 3·63 per cent. In the Large Town Districts the total births number 15018; the males 7760, the females 7258,—a birth-rate of 3·37 per cent.; the mean for the last ten years being 3·60 per cent. In the Small Town Districts 26219 births are recorded, 13450 being of the male and 12769 of the female sex, together showing a birth-rate of 3·11 per cent.;

TABLE VII.—Births in Scotland, 1855-1887; with the Proportion of Males to Females in the Legitimate, Illegitimate, and Total Births; also the Number of Twin and Triplet Births during each year; and the Proportion of Mothers who had Multiple Births.

TABLE VIII.—Births, 1887. Number of Legitimate, Illegitimate, and Total Births in Scotland and its Five Groups of Districts, distinguishing the Sexes. Also the number of Twin and Triplet Births.

FIVE GROUPS OF DISTRICTS.	TOTAL BIRTHS.			Legitimate Births.			Illegitimate Births.			Twin Births.	Triplet Births.
	Males.	Fem.	Both Sexes.	Males.	Fem.	Both Sexes.	Males.	Fem.	Both Sexes.		
Principal Town	26003	24846	50849	23967	22895	46862	2036	1951	3987	554	7
Large Town	7760	7258	15018	7237	6747	13984	523	511	1034	150	3
Small Town	13450	12769	26219	12332	11775	24107	1118	994	2112	291	2
Mainland-Rural	14956	14220	29176	13398	12728	26126	1558	1492	3050	305	5
Insular-Rural	1673	1483	3156	1566	1393	2959	107	90	197	35	1
SCOTLAND . .	63842	60576	124418	58500	55538	114038	5342	5038	10380	1335	18

the mean for the last ten years being 3·38 per cent. In the Mainland-Rural Districts the births are 29176; the males 14956, the females 14220;—equal to 2·89 per cent. of a birth-rate; the mean for the last ten years being 2·99 per cent.; and in the Insular-Rural Districts the births of both sexes together amount to 3156, males 1673, females 1483, equivalent to a rate of 2·44 per cent.; the mean for the last ten years being 2·49 per cent.

As regards the illegitimate births alone, we see from Tables VIII. and IX. how they occurred in the above districts as follows:—In the Principal Town Districts they formed 3987 of the total births therein registered, or 7·6 per cent. of the whole, the males being 2036, females 1951; in the Large Town Districts they stand as 1034, or 6·9 per cent. of the births, 523 being males and 511 females; in the Small Town Districts they are 2112, equal to 8·0 per cent. of the whole, males 1118, females 994; in the Mainland-Rural Districts these same amount to 3050, or 10·4 per cent. of all, males 1558, females 1492; while in the Insular-Rural Districts they are 197, or 6·2 per cent. of the whole births therein registered, males 107, females 90. In other words, one child in every twelve born throughout Scotland during 1887 was illegitimate; in the Principal Town Districts the proportion was one in thirteen, in the Large Town Districts one in almost every fifteen, in the Small Town Districts one in twelve, in the Mainland-Rural Districts one in almost every ten, and in the Insular-Rural Districts one in every sixteen. Like facts as to what occurs in the Principal Towns is found on Tables Va. and Vb.; thus in Dundee and Aberdeen, 10·3 per cent. of the total births registered in them during the year were illegitimate, in Perth, which comes next, they form 9·9 per cent. of all, followed by Edinburgh with 8·5 per cent., Glasgow with 8·3 per cent., Kilmarnock with 7·5 per cent., Leith with 6·6 per cent., Paisley with 6·3 per cent., Greenock with 5·3 per cent., and Glasgow Landward and Suburban with 4·3 per cent.

Table VI. allows of a comparison being made as to the number and rate of such births in the counties of Scotland, where the latter varies from 4·0 per cent. of illegitimates registered in Kinross-shire, to 18·2 per cent. in Wigtownshire, Banffshire stands next highest with 16·8 per cent., followed by Kirkcudbright with 15·7 per cent., and Elgin with 15·2 per cent., Dumfries with 13·9 per cent., and Aberdeen with 13·2 per cent. In

TABLE IX.—Proportion of Births in 1887. Percentage of Births to Population, and of Illegitimate to the Total Births; also the Proportion of Males to Females in the Legitimate, Illegitimate, and Total Births; with the Proportion of Mothers who bare Twins and Triplets in Scotland, and its Five Groups of Districts in 1887.

FIVE GROUPS OF DISTRICTS.	Per-centage of Births to Population.	Per-centage of Illegit. to Total Births.	Proportion of Males to every 100 Females in the			Proportion of MOTHERS who bare TWINS. — One in every	Proportion of MOTHERS who bare TRIPLETS. — One in every
			Total Births.	Legitimate Births.	Illegit. Births.

SCOTLAND . . .	3·117	8·34	105·4	105·3	106·0	92·2	6836

eleven counties the rate is under 7·0 per cent., those showing the lowest being Renfrew with 5·5 per cent., Ross and Cromarty and Dumbartonshire with 5·0 per cent., Shetland with 4·8 per cent., and Kinross as before stated with 4·0 per cent.

Of the total live births registered throughout Scotland during the year, 63842 are of the male, and 60576 of the female sex, which gives a proportion of 105·4 of the former born to every 100 of the latter. The difference in this respect in the case of legitimate and illegitimate births is not great, being 105·3 males in the case of the former, and 106·0 in that of the latter, to each 100 females. In England the male births are in the proportion of 103·9 to every 100 of the female.

During the year under review 1335 mothers bore twins, and 18 bore triplets at a birth, so that of the total mothers who bore children during 1887, and numbering 123065, one in every 92 bore two, and one in every 6836 bore three at a birth.

1887 being the Jubilee of Our Most Gracious Majesty Queen Victoria's reign, the number of children whose parents *named* their offspring in honour of this eventful year is given. 200 male infants were thus distinguished throughout Scotland, 191 of them being named Victor, 3 Victoria, 4 Jubilee, and 2 Victor Jubilee, while of the 269 females 258 were designated Victoria, 2 Regina, 5 Jubilee, 3 Jubilee Victoria, and 1 Victoria Jubilee. The numbers of Victors and Victorias during the previous year, 1886, were 20 of the former and 12 of the latter; and the average of such for the previous five years, 1881 to 1885, was 9 and 8 respectively.

The largest proportion of births in Scotland was registered during the month of May, viz., 8·95 per cent. of the whole, followed by June with 8·83 per cent., March with 8·69 per cent., April with 8·51 per cent., January with 8·43 per cent., July with 8·31 per cent., December with 8·29 per cent., August with 8·28 per cent., October with 8·26 per cent., September with 7·98 per cent., November with 7·96 per cent., and February with 7·47 per cent. When the months are equalised to a similar length of 31 days the births are 9·00 per cent. during June, 8·83 per cent. during May, 8·67 per cent. during April, 8·57 per cent. during March, 8·32 per cent. during January, 8·20 per cent. during July, 8·18 per cent. during December, 8·17 per cent. during August, 8·15 per cent. during October, 8·14 per cent. during September, 8·11 per cent. during November, and 7·63 per cent. during February.

The birth-rate for each ten thousand of estimated population in the following European States is, for the present year, 383 in Italy, 382 in Austria, 378 in Prussia, 369 in the German Empire, 337 in the Netherlands, 320 in Denmark, 294 in Belgium, and 235 in France.

MARRIAGES.

The total number of marriages registered throughout Scotland during the year 1887 is 24876,—an increase over the number for last year by 361, and is equivalent to a rate of 62·32 per ten thousand of the inhabitants, a trifle higher than that for 1886. The mean average rate for the last ten

years, 1877 to 1886, is 68 per ten thousand of the population. The rate in England for 1887 is 71 per ten thousand.

TABLE X.—Marriages, 1887. Number of Marriages contracted in Scotland and its Five Groups of Districts according to the Rites of the several Religious Denominations, and their Proportion to the Total Marriages in each Group.

The marriage-rate varies considerably, as may be presumed, in the five registration districts, in accordance with the density of the population of each, their surroundings and method of gaining a livelihood, &c., being highest in the Principal Town Districts, where it is in the ratio of 75 per ten thousand of the inhabitants of the same, the mean for the last ten years being nearly 84; in the Large Town Districts the ratio is 64 in like proportion, the mean here for the last ten years being 70; in the Small Town Districts the rate is 57 per ten thousand, that for the ten years being 62; in the Mainland-Rural Districts for the present year it is 49, and for the ten years almost 53; in the Insular-Rural Districts being but 34 for 1887, and nearly 42 as the mean of the aforesaid ten years. These ratios, when compared with those of last year, indicate a slight increase in the Large Town Districts, a decrease in the Insular-Rural Districts, being almost without change in the other three districts.

In six counties, as shown in Table VI., the marriage-rate is above that for the country as a whole, viz., in Linlithgow where it is 80·2 per ten thousand of the inhabitants, in Edinburgh it is 75·1, in Lanark 72·4, in Renfrew 64·4, in Ayr 63·9, and in Forfar 62·8. Those counties with the

lowest marriage-rate are Roxburgh with 43·2 per ten thousand, Orkney with 42·1, Inverness with 41·2, Kinross with 40·1, Ross and Cromarty with 36·6, Argyll with 35·5, and Sutherland with 33·0. In fourteen counties the rate for the present year is above that for the previous one, the reverse occurring in the remaining nineteen.

Table Va. affords information as to the number and proportion of marriages which were celebrated in the Principal Towns of Scotland during the year under review. Glasgow and Edinburgh stand first, the former with a ratio of 86·1 in each ten thousand of its inhabitants, the latter with 83·7 in like proportion, followed by Paisley with 79·6, Kilmarnock with 77·6, Aberdeen with 77·5, Perth with 68·6, Dundee with 66·7, Leith with 64·6, Greenock with 61·4, and Glasgow Landward and Suburban with 53·6.

In estimating the fertility of marriages for the year in the usual manner, we find this to be as follows:—the number of marriages registered during 1881 is 26004, and the registered legitimate births during the year we are working with is 114038, thus $\frac{114038}{26004}$ gives 4·38 as the average fertility of each marriage, or 438 children were born to every 100 marriages. In England the average number of children was 4·28 to each marriage, or 428 to every 100 marriages.

Tables XI. and XII. show how the marriages in Scotland were solemnised in accordance with the rites of the various churches, thus 46·99 per cent. of them were performed under the auspices of the Established Church of Scotland, 19·56 per cent. under those of the Free Church, 11·77 per cent. under those of the United Presbyterian Church, 9·74 per cent.

* 97 years of age.

attained the age of 16 at marriage, and one bridegroom was under 17. Thirty-two of the husbands were over 70 when married, three of them being between 80 and 85, and the age of one is given as 97; in seven cases the age of the brides was between 65 and 75.

Table XIV. shows the proportion of marriages during the year under review in Scotland, and its divisions at various ages and for both sexes; thus while in the case of the men 2·66 marriages in every 100 occurred between the ages of 15 and 20 years, 12·00 is the corresponding proportion in that of the females. During the following five years (20–25), 35·74 is the ratio among the men, 44·83 that among the women throughout the country, in both cases exceeded in the Large and Small Town Districts, as also among the wives in the Mainland-Rural Districts. Between 25 and 30 years of age 32·34 of every 100 husbands married during the year in Scotland, 25·82 being the corresponding ratio among the wives, exceeded in both in the Insular-Rural Districts, especially among the latter. After this age the rate falls steadily, and that for both sexes.

In 2961 marriages throughout Scotland during the year the contracting parties were of the same age, in 3070 the husbands were 1 year older than their wives, in 1774 the wives were 1 year older than their spouses, in 2780 the husbands were 2 years older than their wives, and in 1079 the wives were the same as regards their husbands; in 2387 the husbands were 3 years older, in 668 the wives were so; in 2001 the husbands were 4 years older, in 466 the wives were the same; in 1508 the bridegrooms had the advantage by 5 years over their brides, in 280 the latter claimed the same; in 3679 the husbands were between 5 and 10 years older than their wives, in 456 it was the same in the case of the latter; in 1054 marriages the bridegrooms were older than their brides by from 10 to 15 years, the same being the case with 71 wives; in 389 the husbands were from 15 to 20 years older than their wives, being the same with the latter in 10 cases; in 186 the husbands were from 20 to 30 years older than their wives, in 2 cases the wives being just as much older than their spouses; and 49 husbands were older than their wives at marriage by 30 years or more.

The relations of the parties contracting marriage during 1887 are as

follow :—21271 bachelors mated with spinsters, 677 bachelors with widows 2166 widowers with spinsters, and 758 widowers with widows, or 85·51 per cent. of the marriages were between bachelors and spinsters, 2·72 per cent. between bachelors and widows, 8·71 per cent. between widowers and spinsters, and 3·05 per cent. between widowers and widows.

Table XVIII. as usual affords certain information as to the educational qualifications of those who married during the year, inasmuch as from it is obtained the proportions of bridegrooms and brides who wrote or did not when signing the register at the time of the ceremony. Thus in Scotland 95·51 per cent. of the men, and 91·80 per cent. of the women, signed their names, leaving 4·49 per cent. of the former and 8·20 per cent. of the latter to sign by "mark," a further improvement upon last year. In the Mainland-Rural Districts 97·85 per cent. of the husbands, and 96·19 per cent. of the wives signed by writing, while in the Insular-Rural Districts but 85·52 per cent. and 67·65 per cent. respectively did so. In the three Urban Districts the proportions lie between the above, and with no great dissimilarity between each other. Among the counties which fail most in this respect are Ross and Cromarty, where 18·25 per cent. of the men, and 42·46 per cent. of the women signed by "mark" alone; Inverness, where

13·54 per cent. of the men, and 22·65 per cent. of the women did likewise; and Sutherland with 11·11 and 18·06 as corresponding percentages; in nine counties over 10·0 per cent. of the brides were apparently unable to write. In Kincardine and Kinross-shires all the bridegrooms signed the registers, and in Peebles and Selkirk-shires both bridegrooms and brides did the same.

Of the two chief cities of Scotland it is shown at the foot of this table that in Edinburgh 98·38 per cent. of the husbands signed their names, leaving 1·62 per cent. who adhibited their "mark;" in Glasgow 93·29 per cent. signing, and 6·71 per cent. having recourse to their "mark," while in the case of the wives, 97·55 per cent. of them signed in the former city, leaving 2·45 per cent. unable to do so, 86·31 per cent. in Glasgow writing their names, and 13·69 per cent. affixing their "mark."

13·84 per cent. of the marriages throughout Scotland were registered during June, 13·68 per cent. during January, 12·24 per cent. during December, 10·12 per cent. during July, 8·33 per cent. during November, 7·09 per cent. during October, 6·62 per cent. during August, 6·30 per cent. during April, 5·97 per cent. during March and September, 5·50 per cent. during February, and 4·34 per cent. during May.

The marriages per ten thousand of the population during 1887 are in the following European States:—80 in Prussia, 78 in Austria and the

DEATHS.

During the year 74546 deaths were registered throughout the country 36805 being of the male and 37741 of the female sex, giving a mortality-rate of 187 per ten thousand of the estimated population. The rate in the case of the males alone is 190, and in that of the females 184, in each ten thousand of their respective numbers. 1025 female deaths were registered for every 1000 male. The mean death-rate for the last ten years is 198 per ten thousand of population.

On observing the mortality-rate in each of the five districts into which the whole country is primarily divided for registration purposes, it is seen that in the Principal Town Districts 32676 deaths were registered, being at the rate of 209 in every ten thousand of their inhabitants (the mean rate for the last ten years being 232), the male deaths alone numbering 16009, the female 16667: in the Large Town Districts the total deaths are 8911, *i.e.*, at the rate of 200 in each ten thousand of population (the mean for the last ten years being 210), the male deaths 4453, the female 4458: in the Small Town Districts the total mortality is 15144, or 180 deaths in each ten thousand of the population of the same (the mean for the last ten years being 189), the male deaths numbering 7574, the female 7570: in the

Mainland-Rural Districts the deaths are 15801, or 156 per ten thousand (the mean for the last ten years being 161), the male deaths 7784, the female 8017: and in the Insular-Rural Districts the total deaths are 2014, equal to 156 in each ten thousand of population (the mean for the last ten years being 157), the male deaths alone 985, female 1029. The death-rate is therefore highest in the Town and lowest in the Country Districts, and on a comparison with last year's ratios shows a decrease for the present year in the case of the Principal Town Districts, Small Town Districts, and Mainland-Rural Districts, a slight increase occurring in that of the other two.

Tables XXI. and XXII. indicate the number of deaths, and the corresponding mortality-rate in each of the Principal Towns of Scotland:— Thus in Glasgow the deaths during the year amount to 12135, equal to a death-rate of 23 in every thousand of its population as estimated to the middle of the year; in Edinburgh the deaths number 5098, the equivalent rate being about 20 per thousand; in Dundee the deaths are 3351, in the ratio of 21 per thousand; in Aberdeen the deaths are 2550, at the rate of about 22 per thousand; in Greenock the deaths are 1504, the rate almost 20 per thousand; in Leith the deaths are 1265, the rate nearly 18 per thousand; in Paisley the deaths are 1582, the mortality-rate 26 per thousand; in Perth the number of deaths is 591, and the corresponding rate 18 per thousand; in Kilmarnock the deaths are 510, the rate 19 per

thousand, and in the Landward and Suburban of Glasgow the deaths number 4090, equal to a death-rate of 17 per thousand of the estimated population of the same.

From Table XX. is found the mortality-rate of males and females to the population of Scotland as estimated for the year and for each of its five primary registration districts, showing how this rate in the case of both sexes in the Principal and Large Town Districts exceeds that for Scotland as a whole, the reverse being the case in the Small Town and both Rural Districts; and also how in all cases excepting the Mainland-Rural Districts the male mortality-rate exceeds that of the female.

Tables XXIII. and XXIV. give the number of deaths, male and female, and the varying proportions of the same to the estimated population at a series of ages in Scotland, and each of its five registration districts. Thus from the latter Table it is seen that at ages under one year, throughout Scotland generally, the mortality-rate among male infants is 14·186 per cent., that among the female infants being 11·718 per cent. These proportions are exceeded in the case of both sexes in the Principal and Large

Report.

Town Districts, in the former the death-rate among the males at this tender age being 16·549 per cent., among the females 13·867 per cent., and in the latter—the Large Town Districts—16·128 per cent. and 13·425 per cent. respectively. The death-rate below one year of age is lowest in the Insular-Rural Districts, being here in the case of the males 7·673 per cent., and of the females 5·961 per cent., and in each district the male death-rate is above that of the female at the same age.

Under two years of age the proportion of male and female deaths in Scotland did not vary much, being 5·756 per cent. in the case of the former and 5·701 per cent. in that of the latter, these proportions being exceeded in the case of both sexes in the Principal and Large Town Districts. In the Rural Districts the female mortality-rate overtops that of the male.

Of children under three years of age 2·508 per cent. of the males and 2·486 per cent. of the females died in Scotland during the year under review, exceeded in the case of both sexes in the Principal Town Districts, and in that of the males in the Large Town Districts, and in the Mainland and Insular-Rural Districts the female rate exceeded the male.

Under four years of age the rate for Scotland does not vary much in the case of either sex, being 1·521 per cent. in that of the males and 1·457 per cent. in that of the females, again exceeded in the case of both sexes in the Principal Town Districts, and in that of the females in the Large Town Districts, where, as also in the Insular-Rural Districts, the female death-rate is higher than that of the male.

Under five years of age the mortality-rate for the whole country as to sexes is again not very different, being in the case of the males 1·100 per cent. and in that of the females 1·112 per cent., exceeded in both cases in the Principal and Large Town Districts; in all the districts except those of the Small Towns the female death-rate is now above that of the male.

TABLE XXIII.—Ages of Males and Females who died in Scotland, and in each of its Groups of Districts, during the Year 1887.

On comparing the mortality-rate for Scotland during the second quinquennial period of life (5-10 years) with that for the first (0-5 years), there is as usual found to be a great difference, the rate for the former, in the case of the males being 0·626 per cent., as compared with 5·170 per cent. in the latter, and in the case of the females 0·669 per cent., as compared with 4·620 per cent. The rate between 5-10 years in the case of the Principal and Large Town Districts is above that for Scotland, and in all cases, except in the Large Town Districts, the female death-rate is higher than that of the male. Between 10-15 years the death-rate is at its lowest, being for Scotland 0·416 per cent. in the case of the males and 0·449 per cent. in that of the females, rates overtopped in the case of the Principal and Large Town Districts, and in all cases, except the Insular-Rural Districts, the female rate is higher than the male. Between 15-20 years the mortality-rate in the three Urban Districts, and that in the case of both sexes, is higher than for Scotland, and in all but the Mainland Rural Districts the female rate is higher than the male. After 20 years of age the rate goes on increasing, and as a rule the Urban rate exceeds that for Scotland and the Rural Districts, until the most advanced ages are reached, when the Rural mortality becomes the greatest. The male mortality after 50 is almost universally higher than the female until 90 years and above are attained, when females die in greater proportions than males of like ages.

Taking the proportion of deaths male and female at all periods of life together, we find that throughout Scotland, during the year, 190 per ten thousand of the males estimated to be alive died, and 184 of the females; in the Principal Town Districts the male rate is 215, the female 204; in the Large Town Districts the male rate is 204, the female 197; in the Small Town Districts the male rate is 185, the female 174; in the Main-

and Large Town Districts, being, on the other hand, almost double those in the Insular-Rural Districts. As usual, except at the most advanced ages, the lowest proportion of deaths occurs between the ages of 10 and 15 years. In all cases after 60 years the female ratio of deaths is greater than among the males of like ages, except in the Rural Districts between 60 and 70, and in the latter districts a larger proportion of both men and women evidently attained to greater age than in the Urban.

Table XXVa. shows the mortality-rate as above, for the ten years 1877-1886, also giving the rate for the year under review, and indicates a slight increase for the present year, over the mean of the ten, during the first three years of life in the case of both male and female children, as also of the males under five years. At most of the other ages the rate for the present year is under that of the average.

The death-rate per ten thousand is in the undernoted European States during 1887, as follows:—Denmark 183, Belgium 193, The Netherlands 197, France 220, Prussia 239, German Empire 242, Italy 277, and Austria 289.

CAUSES OF DEATH.

The number of deaths registered throughout Scotland during 1887 was 74546, in 745 of those, however, the cause was ill-defined or so specified as to be of no use for statistical purposes.

The proportion of deaths throughout Scotland per hundred thousand of the estimated population was for the combined sexes 1868, slightly higher than for last year, that for the males alone being 1903, that for the females 1834. These ratios are exceeded in the case of both sexes in the Principal and Large Town Districts, the reverse occurring in the other three. The highest rate is in the Principal Town Districts, where it is 2150 in the case of the males and 2038 in that of the females; the lowest being in the Insular-Rural Districts, where for the males it is 1608 and for the females 1510.

The deaths ascribed to Zymotics during the year number 10819, which is 2716 more than for last year, and is in the proportion of 274 in each hundred thousand of the presumed inhabitants of Scotland, or 14·66 per cent. of the specified deaths come under this heading. Tables XXVIII. and XXIX. show this rate to be exceeded in the Principal and Large Town Districts, and that in all cases the female mortality-rate is above that of the male.

Table XXXII. indicates the number and proportion of deaths at different ages from the chief Zymotics and some other diseases at given successive periods of life. Thus of the total 10819 deaths from Zymotics at all ages, 7564 were reported as occurring during the first five years of life, 965 between the ages of 5 and 10 years, 317 between 10 and 15 years, 1405 between 15 and 60 years, and 568 at ages over 60 years; or in every hundred deaths of this nature 69·9 occurred during the first quinquennial period of life, 8·9 during the following, 2·9 between 10 and 15 years, and 18·3 at ages over this. So that for the present year 81·7 per cent. of the deaths from Zymotics are registered as occurring up to the age of 15 years. Again Table XXXIII. indicates how, of the total mortality in Scotland, 27·89 per cent. of the deaths which were registered as occurring during the

Dysentery caused 1867 deaths, 1316 or 70·5 per cent. of them during the first five years of life, the next highest period of mortality being at ages over 60, when 338 or 18·1 per cent. of the whole succumbed. To Measles 1598 deaths are ascribed, 1413 or 88·4 per cent. of the whole dying during the first five years of life, 126 or 7·9 per cent. during the following five, the remaining 59 at greater ages, 3 of them being individuals of over 60. Scarlet-Fever is accountable for 1179 exits, 711 or 60·3 per cent. of those at ages under 5 years, 307 or 26·0 per cent. between 5 and 10 years, 90 or 7·7 per cent. between 10 and 15 years, and 71 or 6·0 per cent. at greater ages than the above. Fevers caused 1037 deaths, 586 or 56·5 per cent. being between 15 and 60 years. Typhoid or Enteric caused 835 deaths in all, 81 or 9·7 per cent. of them during the first five years of life, 127 or 15·2 per cent. between 5 and 10 years, 115 or 13·8 per cent. between 10 and 15 years, 463 or 55·4 per cent. between 15 and 60 years, and 49 or 5·9 per cent. at ages over 60. Typhus caused 126 deaths, 100 of them or 79·4 per cent. at ages between 15 and 60 years, 10 at ages over 60, and 16 at ages under 15 years. Simple or Ill-defined Fever caused 65 deaths, Relapsing Fever 7, and Cerebro-Spinal Fever 4. Diphtheria caused 805 deaths, 539 or 67·0 per cent. of them during the first five years of life, 179 or 22·2 per cent. during the succeeding five years, the remaining 87 at ages over 10 years. 275 deaths were ascribed to Puerperal Fever. Erysipelas caused 272 deaths, 105 or 38·6 per cent. of them during the first five years of life, 73 or 26·8 per cent. between 15 and 60 years, and 87 or 32·0 per cent. at ages over 60. From Syphilis 244 deaths are registered, 212 or 86·9 per cent. of those occurring during the first five years of life, 26 or 10·7 per cent. between 15 and 60 years, and 5 at ages above 60.

Of the total specified deaths in Scotland during the year, as before stated, 10819 come under the head of Zymotics, and are equivalent to a

ALL AGES.	12135	5098	3351	2550	1504	1265	1582	591	510	4090

In Greenock 343 deaths in each hundred thousand of population are due to Zymotics, or 17·31 per cent. of all. Hooping-Cough caused 198 of the above; Diarrhœa and Dysentery 45; Diphtheria 25; Measles 22; Fevers 18 (of which Typhoid and Typhus each cause 9).

In Leith the mortality from Zymotics is 288, or 16·47 per cent.; of which proportion 119 fall to Hooping-Cough; 73 to Diarrhœal Affections; 19 each to Measles and Scarlet-Fever; 16 to Diphtheria; and 15 to Fevers (of which 14 are Enteric and 1 Typhus).

In Paisley 385 is the proportion, or 14·83 per cent. of the total deaths. Fevers cause 100 of the above (81 Typhoid, 16 Typhus); Diarrhœa and Dysentery cause 99; Hooping-Cough 85; Scarlet-Fever and Diphtheria each 18; and Measles 5.

In Perth 383 per hundred thousand of the inhabitants, or 20·92 per cent. of all the deaths were Zymotic in character, a ratio of 125 of them being due to Hooping-Cough; 69 to Scarlet-Fever; 65 to Diarrhœa and Dysentery; 41 to Measles; 15 to Fevers (12 being Enteric); 9 to Diphtheria; and 6 to Small-Pox.

In Kilmarnock 325 is the proportion, or 17·29 per cent. of all deaths are Zymotic; to Diarrhœal Affections 59 of those are ascribed; 52 to Diphtheria; 48 to Hooping-Cough; 26 to Fevers (22 being Enteric); and 11 each to Measles and Scarlet-Fever.

In Glasgow Landward and Suburban 301 in every hundred thousand of population succumbed to one or other of the Zymotics, or 17·58 per cent. of the total deaths were of this nature. Of these, 99 fall to Hooping-Cough; 64 to Measles; 40 to Diarrhœa and Dysentery; 32 to Scarlet-Fever; 20 to Fevers (14 Typhoid and 5 Typhus); and 19 to Diphtheria.

From Small-Pox 17 deaths occurred throughout Scotland during 1887, and in the Counties as follows:—In Aberdeen 2 males thus died, both at the age of 34, 1 in June, the other in August, as also 1 female æt. 57, in June; in Perth 2 females æt. 23 and 18 years, and both during October. In Fife they number 7, in the persons of 3 males æt. 27, 35, and 41 years, 2 during August, and 1 during September, and 4 females æt. 18, 23, 29, and 54 years, 1 during each of the months of June, July, September, and October; 4 deaths occurred in Renfrew, 2 males æt. respectively 8 and 41 years, the former in June, the latter in July, and 2 females æt. 26 and 28 years, 1 in May, the other in August; and lastly, a young man æt. 24 succumbed to the same disease in Edinburgh during the month of December. Of the above, 3 males and 2 females were stated to have been vaccinated, 1 male to be unvaccinated, while the condition of 4 males and 7 females as to this was not apparent from the Death Register.

Measles is the ascribed cause of 1598 deaths throughout Scotland during the year, equivalent to 40 per hundred thousand of the population, or 2·17 per cent. of the total specified mortality; 808 of them were males, and 790 females. The highest death-rate from Measles occurs in the Principal Town Districts, where it is in the ratio of 55 per hundred thousand of population, the lowest in the Mainland-Rural Districts, or 23 per hundred thousand. Scarlet-Fever caused 1179 deaths, or 30 per hundred thousand of population, and equal to 1·60 per cent. of the total specified deaths; males numbering 588, females 591, and here again the heaviest rate occurs in the Principal Town Districts, viz., 46 per hundred thousand, the lowest being in the Insular-Rural Districts, where it was but 6 in like proportion.

Hooping-Cough caused 3212 deaths, equal to 81 per hundred thousand

thousand of their estimated population, and lowest in the Insular-Rural Districts, where it is 20.

Diphtheria caused 805 deaths, in the ratio of 20 per hundred thousand or 1.09 per cent. of the total deaths; males 372, females 433, being most marked in the Principal and Large Town Districts.

Continued Fevers are the cause of 1037 deaths, equivalent to a rate of 26 per hundred thousand of population, or 1.41 per cent. of all the specified deaths; the males number 518, the females 519, and in all the Districts, with the exception of those of the Principal Towns and Mainland-Rural, the rate is above that for Scotland as a whole, being highest in the Small Town Districts, where they caused a mortality-rate of 32 per hundred thousand of population, or 1.76 per cent. of all the deaths therein occurring. Typhus caused 126 deaths, or 3 in every hundred thousand of population. Enteric or Typhoid 835, equal to 21 per hundred thousand,

or 1.13 per cent. of all the deaths; 420 males and 415 females. It was most marked in the Large and Small Town Districts. From Table XXXVII. it is seen that 226 of the deaths from Enteric Fever occurred in the Rural Districts, constituting 83.09 per cent. of the total mortality from the various forms of Continued Fever in the same, while 609, or 79.61 per cent. are the corresponding figures in the Urban Districts; and again, while 7.72 per cent. of the deaths from Fever in the Rural Districts were due to Typhus, the percentage for the same in the Urban Districts was 13.73.

Diarrhoea and Dysentery caused 1867 deaths, equal to 47 per hundred thousand of population, or 2.53 per cent. of all the deaths; males 924, females 943. These proved most fatal in the Principal and Large Town Districts, where they caused 57 and 61 deaths respectively per hundred thousand of the estimated population of the same, being but 14 in the Insular-Rural Districts. Of the total Diarrhoeal deaths 1316 or 70.5 per

cent. of the whole, were registered as occurring during the first 5 years of life.

To Cancer 2373 deaths are ascribed, equal to 60 in every hundred thousand of the population as estimated, or 3·21 per cent. of the total deaths; males 876, females 1497. Disease of this nature was proportionately most fatal in the Mainland-Rural Districts, where the rate is 65 per hundred thousand. As to the incidence of the disease in the Principal Towns, Tables XXX. and XXXI. indicate how, in Kilmarnock, 53·0 in every thousand deaths were due to Cancer, in Edinburgh 47·7, in Perth 37·4, in Leith 34·8, in Aberdeen 33·8, in Greenock 28·6, in Dundee 25·7, in Glasgow 22·8, in Glasgow Landward and Suburban 22·6, and in Paisley 16·5.

Diseases of a Tubercular nature caused 10275 deaths, equivalent to a rate of 260 in every hundred thousand of the inhabitants of Scotland, or 13·92 per cent. of all the specified mortality; male deaths are 5046, female 5229. The heaviest mortality from such is in the Principal and Large Town Districts, in the former of which the rate is 309 per hundred thousand, or 14·76 per cent. of all deaths, and in the latter 284, or 14·18 per cent. In the Small Town Districts the rate to population is 255, in the Mainland-Rural Districts 188, and in the Insular-Rural Districts 185. Phthisis or Consumption causes the greatest mortality among diseases of this nature, 7418 deaths being so induced, of which 3511 are of the male, and 3907 of the female sex, together equal to a death-rate of 188 in every hundred thousand inhabitants, or 10·05 per cent. of all the specified deaths. The highest ratio from this occurred in the Principal Town Districts, where 10·54 per cent. of the total are so caused, next come the Insular-Rural

Districts with 10·38 per cent., followed by the Large Town Districts with 10·27 per cent., the Small Town Districts with 10·00 per cent., and the Mainland-Rural Districts with 8·92 per cent. Among the Principal Towns the greatest mortality from Phthisis occurred in Glasgow Landward and Suburban, where it formed 12·06 per cent. of the total specified deaths, followed by Kilmarnock, where it was 11·98 per cent., Glasgow 11·27 per cent., Dundee 11·22 per cent., Leith 10·29 per cent., Greenock 9·59 per cent., Edinburgh 9·51 per cent., Paisley 9·44 per cent., Perth 7·99 per cent., and Aberdeen 7·42 per cent. *Tubercular Meningitis* caused 1224 deaths; males 647, females 577, and *Scrofula* 651; males 340, females 311.

To Diseases of the Brain and Nervous System 8633 deaths are ascribed, equal to 218 per hundred thousand of population, or 11·70 per

1871	1,442		

cent. of the total specified deaths; males 4388, females 4245. The mortality from diseases of this nature is higher in the Urban than in the Rural Districts, and somewhat more so in the Large Town Districts than in the Principal and Small Town Districts. Of the various affections under this heading, Apoplexy caused 2157 deaths; males 985, females 1172, and Paralysis 1905 deaths; males 857, females 1048. In the towns, 14·32 per cent. of the total specified mortality in Paisley was due to diseases of a nervous character, 12·78 per cent. in Greenock, 12·72 per cent. in Glasgow Landward and Suburban, 12·21 per cent. in Aberdeen, 11·59 per cent. in Kilmarnock, 11·22 per cent. in Perth, 11·19 per cent. in Glasgow, 11·06 per cent. in Edinburgh, 10·15 per cent. in Dundee, and 9·82 per cent. in Leith.

Diseases of the Circulatory System, the Heart and Blood-Vessels, caused 6059 deaths, equal to 153 in every hundred thousand of population, or they formed 8·21 per cent. of the total deaths throughout the year; males 2944, females 3115. The greatest percentage of mortality from diseases of this nature occurred in the Mainland-Rural and Small Town Districts, where 9·75 and 8·92 respectively of the deaths therein registered are under this heading. In Kilmarnock, among the Principal Towns, 12·18 per cent. of the total deaths are due to Disease of the Organs of Circulation, Edinburgh coming next with 10·53 per cent., followed by Leith with 10·37 per cent., Perth with 9·01 per cent., Dundee with 7·52 per cent., Aberdeen with 7·46 per cent., Paisley with 7·03 per cent., Greenock with 6·52 per cent., Glasgow Landward and Suburban with 6·42 per cent., and Glasgow with 6·14 per cent.

From Diseases of the Respiratory Organs, other than those included

under Phthisis, 14247 deaths are registered, equal to 361 in every hundred thousand of population, or 19·30 per cent. of the specified deaths; males 7304, females 6943. In the Principal Town Districts, 450 persons in every hundred thousand estimated to be alive there died from such affections, or 21·54 per cent. of the specified deaths are of this nature; in the Large Town Districts, 374 per hundred thousand, or 18·70 per cent. of all who died thus succumbed; in the Small Town Districts, the ratio is 320 per hundred thousand, or 17·84 per cent.; in the Mainland-Rural Districts, 261, or 16·71 per cent.; and in the Insular-Rural Districts, 258, or 16·55 per cent. Bronchitis caused 7409 deaths, equal to 187 per hundred thousand, or 10·04 per cent. of all; males 3542, females 3867. Pneumonia caused 4220 deaths, 107 per hundred thousand, or 5·72 per cent. of all; males 2366, females 1854. Croup caused 800 deaths; males 430, females 370.

Among the Principal Towns 24·13 per cent. of all the deaths in Glasgow were due to such diseases as above, in Paisley they formed 23·32 per cent. of all, in Greenock 21·90 per cent., in Dundee 21·52 per cent., in Leith 19·79 per cent., in Aberdeen 19·56 per cent., in Glasgow Landward and Suburban 19·24 per cent., in Edinburgh 18·80 per cent., in Perth 18·54 per cent., and in Kilmarnock 16·90 per cent.

To Diseases of the Digestive Organs 5232 deaths are ascribed, equal to 132 per hundred thousand of the population, or 7·09 per cent. of all the specified deaths; males 2585, females 2647. The mortality from diseases of this nature in the Urban Districts considerably exceeds that in the Rural.

TABLE XXXVI.—Vaccinations in Scotland, 1877–1887, deducting from the Births those who died before they could be vaccinated, and giving the Proportion of the Vaccinated to the surviving Births of each Year.

Years.		Successfully Vaccinated.	Vaccination Postponed.	Insusceptible of Vaccination.			Removed from District before Vaccination, or otherwise unaccounted for.	TOTAL LIVING.

Among the Principal Towns, Paisley stands first with 7·03 per cent. of all the deaths due to those affections, Kilmarhook follows with 6·68 per cent., Edinburgh and Aberdeen each with 6·64 per cent., Glasgow with 6·57 per cent., Glasgow Landward and Suburban with 6·50 per cent., Greenock with 6·39 per cent., Leith with 6·18 per cent., Perth with 5·78 per cent., and Dundee with 5·34 per cent. Enteritis caused 937 deaths, Peritonitis 796, Hernia 137, Ileus, Stricture of Intestine, and Intussusception 396, and Liver Diseases 939.

To Disease of the Urinary Organs 1730 deaths are credited, equal to 14 per hundred thousand of the population, or 2·34 per cent. of the total mortality; males 1059, females 671. Acute Nephritis caused 329 deaths, Bright's Disease 608, Calculus 37, Disease of Bladder and Prostate 830, and other Diseases of Urinary Organs 304.

Diseases of the Generative Organs caused 220 deaths; 15 males and 215 females, 69 being from Ovarian Disease, and 127 from Uterine Affections.

Diseases incidental to Parturition, not including Puerperal Fever, caused 338 deaths, the latter alone being the registered cause of 275.

To Disease of the Bones and Joints 459 deaths are ascribed; males 252, females 207, and to those of the Integumentary System 242.

From Developmental Diseases, not including Old Age, there are 2065 deaths; males 1143, females 922. Premature Birth caused 1670, Atelectasis 107, Cyanosis, Spina Bifida, and other Congenital Defects 288.

From Old Age 4523 were recorded; 1671 being men, and 2852 women, 36 of the former and 104 of the latter were between 95 and 100, and 5 men and 21 women were reported to be 100 years old or upwards at death. One man was 100 at death, one 101, two 103, and one 107; 9 women were 100 at death, six 101, three 102, two 103, and one 104; 17 of the 21 were widows.

To Violence in its various forms 2587 deaths are attributed; males 1887, females 700, equal to a rate of 65 per hundred thousand of population. Fractures and Contusions account for 836, males 632, females 204; Burns and Scalds for 270, males 142, females 128; Drowning for 576, males 505, females 71, of which 520 were accidental and 56 suicidal. 220 males and 130 females were accidentally suffocated, and 30 males and 20 females

TABLE XXXVII.—Deaths from Fever in 1887.

were accidentally poisoned. Of these latter Opium was the cause in the case of 10 males and 10 females; Morphia in that of 2 males; Belladonna in that of 1 female; Chloral Hydrate in that of 2 males; Chloroform in that of 1 male and 1 female; Sulphuric Ether in that of 1 female; Aconite in that of 1 male; a mixture of Belladonna, Aconite, and Opium in that of 1 male; Bromide of Potassium in that of 1 male; Hydrochloric Acid in that of 1 male; Sulphuric Acid in that of 1 male and 1 female; Carbolic Acid in that of 1 female; Caustic Potash in that of 1 male; Bi-carbonate of Potash in that of 1 male; Cyanide of Potassium in that of 1 female; Lead in that of 1 male and 2 females; Iodine in that of 1 male; Arsenic in that of 1 male; and Bi-chloride of Mercury in that of 1 female. Eating portions of a plant "*Ceanothe Crocata*" caused the death of 1 male; and partaking of Decayed Currants another male; while the sucking of Lucifer Matches caused the death of a third male. As regards 2 males the poison swallowed was not stated. In the case of Suicides 8 males and 6 females used Opium to effect their purpose; 1 female took Morphia; 1 male Chloral Hydrate; 4 males Prussic Acid; 1 male and 2 females Strychnia; 1 male Arsenic; and in the case of 1 of either sex the name of the poison is not mentioned.

The other methods of Suicide were:—15 males and 1 female shot themselves; 42 males and 13 females succumbed after cutting or stabbing

TABLE XXXVIII.—Monthly Deaths from Fever in Eight of the Principal Towns of Scotland during the Ten Years 1878–1887; specifying those from Typhus and Enteric Fever.

themselves; 37 males and 19 females drowned themselves; 42 males and 16 females hanged themselves; and 13 males and 4 females ended their existence in manners not specially stated.

In the Principal Town Districts 63 males and 30 females committed Suicide; in the Large Town Districts 15 males and 11 females did the same; in the Small Town Districts 45 males and 8 females; in the Mainland Rural Districts 40 males and 13 females; and in the Insular-Rural Districts 2 males and 1 female did likewise.

Twenty-one cases of Homicide were registered during the year.

WEATHER AND ITS INFLUENCE ON THE MORTALITY.

The following remarks on the weather of 1887 are extracted from the Astronomer-Royal's Notes appended to the Monthly Reports issued by the Registrar-General.

January was on the mean of its whole extent not remarkable in an extreme degree for any given, or ordinarily recognised meteorological feature, though inclining in a second degree to rather higher mean temperature, less rainfall, more strength of wind, and that chiefly from the W.S.W. Yet the mean temperature was sufficiently low to have caused most of the so-called rainfall to have been in reality snowfall, and to have kept the face of the country white, in place of green, for a considerable number of days, and to have produced no little irritation to citizens on account of the supposed ill-considered rules of municipalities regarding the clearance of pavements and removal of the proceeds.

While amongst the *direct* characteristics of the weather of *February* it may be cited that the mean temperature was nearly 1° above the mean of all former Februarys; the daily range of temperature greater by rather more than 1°; the depth of rainfall smaller by one-third; the strength of wind less by a tenth; the N. and E. elements of its direction

TABLE XL.—Monthly Mortality and Mean Temperature in Scotland during 1887, compared with the Mean of the Ten Years 1871–1880.

YEAR 1887.				1871–1880.	
MONTHS.	Mean Temperature.	Actual Deaths.	Proportion to 12,000 per Annum, or 1000 per Month.	Monthly Proportion of Deaths.	Mean Temperature.
January	37·5	7096	1143	1154	37·5
February	39·7	5827	939	1061	38·6
March	38·6	7113	1146	1138	40·2
April	42·3	6396	1030	1064	44·2
May	48·9	6488	1045	1040	48·4
June	57·6	5801	934	939	54·7
July	59·3	5779	931	921	57·3
August	56·4	5829	939	893	57·3
September	51·5	5277	850	834	52·6
October	44·1	5683	915	885	46·5
November	39·6	6146	990	949	40·2
December	36·1	7065	1138	1122	37·0
YEAR	46·0	74,500	12,000	12,000	46·2

rather less, but the W. greater—there was over-shadowing or over-ruling these features the very notable *indirect* one of the mean barometric pressure being greater than ever recorded before for the February of any year, and greater than the mean of all former Februaries by no less a quantity than 0.331 inch—the barometric range at the same time being not far from the normal.

March, which began with remarkably mild weather, but presently relapsed into cold and snow, proved, on the mean of the whole month, nine-tenths of a degree Fahr. colder than the mean March of all former years; but was 1.4 above the temperature of last year's March, and its longer continued and far deeper snowfalls.

April was on the whole a very cold, dry, and generally inclement month, these characteristics being accompanied by high barometric pressure, and a barometric range greater than the average; while the mean temperature was less than the average by nearly two degrees.

May was characterised by high barometric pressure and large monthly range, accompanied by small rainfall, and a wind pressure greater than the average by 0.44 lbs. on the square foot, while the mean temperature was nearly an average.

In *June* the greatness of the mean height of the barometer was unprecedented in all previous Junes,—excepting that of 1865. The mean temperature, 58.4, was a far higher figure than the same return for June

TABLE XLI.—Meteorology of Scotland for 1887, deduced from Observations made at 55 Stations of the Meteorological Society of Scotland, the particulars for each of the Stations having been published in the Quarterly Reports of the Registrar-General; also, the Number of Births, Deaths, and Marriages registered during each Month of the Year 1887, as stated in the Quarterly Reports.

1887.	Jan.	Feb.	Mar.	April.	May.	June.	July.	Aug.	Sept.	Oct.	Nov.	Dec.	YEAR

has reached for more than 20 years past; but the most remarkable feature was the scantiness of the rainfall, joined to the previous dry state of the country.

While the barometric pressure for *July* was near the ordinary quantity, its monthly range was much greater, and with such disturbance, the rainfall was heavier than in any other month of the present year, except *January*. And yet as a rainfall for *July*, it was scanty, or almost $\frac{1}{2}$ of an inch less than the mean of all former months of *July*. At the same time the mean temperature was remarkably high, higher indeed than in any one recorded year, except that of 1868, while the prevailing dryness of the air was shown by a humidity return so small as 76.

August 1887 was a month of remarkable quietude, comfort, and pleasantness, with nothing much out of the way, or differing notably from the mean of former years for the same month; the small differences found being generally on the side of what is agreeable and healthy.

With the month of *September* the long drought of the spring and summer of 1887 decidedly closed. The barometric pressure was rather high, but much disturbed; mean temperature, rather low; humidity, abundant; a greater number of rainy days, and greater depth of rainfall than the average; not much wind, and its direction inclining more to E.N.E. than usual.

The weather of *October* was characterised by unusually high barometric pressure and low mean temperature, accompanied by less humidity, a smaller number of rainy days, and a smaller depth of rainfall than the average; while the wind was slightly above the average as to pressure on the square foot, and had a more than usually great preponderance of westerly direction.

TABLE XLII.—Showing the connection between certain Atmospheric Phenomena, especially Temperature, and the Deaths from certain Diseases and Classes of Disease, in Eight of the Principal Towns of Scotland, during each Month of the Year 1887.

The month of *November* was generally disturbed, cold, damp, wet, windy, and with east wind preponderating; but none of these influences prevailed to any remarkable extent.

December was remarkable for low barometric pressure, small barometric range, low mean temperature, small depth of rainfall, and small force of wind, the direction of the winds and the quantities of the other elements being nearly as usual.

Table XL shows the mean temperature of the year in Scotland to have been 46°O , which is almost the same as that for the average of a series of years (1871-1880) selected for comparison. The mean temperature in the case of seven of the months was under that of the mean for the whole year, being above it in the other five. June and July indicated the highest monthly mean temperature. December decidedly the lowest.

Tables XLI. and XLII. afford information as to various meteorological conditions in Scotland, as also giving the number of Births, Deaths, and Marriages registered throughout the country during 1887. As usual, those months in which the most severe or inclement weather occurred indicate the greatest death-rate. Thus in Scotland 7113 deaths, or 9.55 per cent. of the whole are registered during March, it being the month in which there was the lowest thermometric reading. In January 7096 deaths, or 9.52 per cent. of all were registered, and in December 7065 deaths, 9.48 per cent. of all, in both of which the lowest mean monthly temperature is found. Table XLII. shows the same thing in the case of eight Principal Towns, the mortality being highest in these same months as is the case for the country as a whole; an average number of 91 daily deaths occurring during March, 89 during January, and 82 during December; the lowest average being 69 during August, 68 during July, and 66 during September.

TABLE XLIII.—Deaths, Temperature, and Fall of Rain in Eight of the Principal Towns of Scotland during each Week of the Year 1887; also the Proportion of Deaths to every Thousand of the Population.

No. of Week.	Week ending	DEATHS	Prop. to every 1000 of Population.	TEMPERATURE.			RAIN, in inches	No. of Week.	Week ending	DEATHS	Prop. to every 1000 of Population.	TEMPERATURE.			RAIN, in inches.

One death from Small-Pox was registered in those towns during June, one during August, and two during October.

Measles was most prevalent during February, March, and April. Scarlet-Fever had its most pronounced mortality during the earlier and later months of the year, its lowest during May and June. Hooping-Cough, gradually increasing, caused most of its mortality during April, May, June, and July, the least during October. The greatest mortality from Diphtheria occurred during November, December, and January, the lowest during May. Diarrhoea gives rise to its greatest mortality during July, August, and September, its lowest during April and May.

Phthisis is the cause of many deaths during each month, most marked, however, during March, April, May, and June, least so during August, September, and November.

TABLE XLIV.—Monthly Mortality at Four Periods of Life in Eight of the Principal Towns of Scotland during the Year 1887, and Proportion at each Age in every Hundred Deaths per Month.

MONTHS.	Actual Number of Deaths in 1887.					Proportion at each Age in every Hundred Deaths per Month.				
	0-5 years.	5-20.	20-60.	60 and above.	Total Deaths.	0-5 years.	5-20.	20-60.	60 and above.	Total.

TABLE XLV.—Months equalised to 31 Days, and Deaths at each Age corrected thereto, in order to show the relative Mortality at each Age in Eight of the Principal Towns during each Month of the Year 1887.

MONTHS.	Relative Number of Deaths in 1887.					Monthly Deaths proportioned to 1000 per Month or 12,000 per annum.
	0-5 years.	5-20.	20-60.	60 and above.	Total.	
January . . .	1054	226	925	565	2770	1162
February . . .	1027	262	690	484	2463	1033
March . . .	1212	253	799	549	2813	1180
April . . .	1039	241	776	427	2483	1042
May . . .	1021	219	660	471	2371	995
June . . .	955	246	658	401	2260	948
July . . .	938	209	612	338	2097	880
August . . .	911	211	606	398	2126	892
September . . .	871	193	620	365	2049	859
October . . .	875	208	648	428	2159	906
November . . .	1085	235	712	474	2456	1030
December . . .	1055	229	744	529	2557	1073
YEAR . . .	11,993	2,732	8,450	5,429	28,604	12,000

Diseases of the Respiratory Organs cause more deaths than any of the above during every month of the year, being most marked, however, during January, March, November, and December; and the largest number of deaths from Disease of the Circulatory Organs are registered during January, March, and December.

From Old Age the largest number, 99, succumbed during January, 97 during March, and 95 during December; 68, the smallest, during July.

Tables XLIV. and XLV. are designed to indicate the varying monthly mortality in the aforesaid towns at four periods of life, viz., in childhood, during adolescence, among adults, and among old persons. Thus from the former Table it appears that of the total 28068 deaths, 11769, or 41·9 per cent. of the whole, were registered as occurring during the first five years of life, 2677 or 9·5 per cent. at ages between 5 and 20 years, 8294 or 29·6 per cent. between 20 and 60 years, the remaining 5328 or 19·0 per cent. dying at ages over this. The deaths during the first five years were most numerous during January, March, April, May, November, and December, those months during which some Miasmatics and Chest Affections were most fatal. Adolescents (5-20 years) suffered most during February, March, April, and June, when certain of the Miasmatics, as also Consumption and other Chest Affections, were fatal. Adults (20-60) had their highest mortality during January, March, and April, months when deaths from Diseases of the Respiratory Organs, Heart and Brain, were most marked, and lastly, the Aged (60 and over) succumbed in greatest numbers during January, March, and December.

When the lengths of the months are equalized to 31 days the relative monthly mortality is, as shown on Table XLV., found to be greatest during March, followed by January, December, February, November, April, May, June, October, August, July, and September.

I have the honour to be,

SIR,

Your most obedient Servant,

R. J. BLAIR CUNYNGHAME, M.D.

GENERAL REGISTRY OFFICE OF BIRTHS, &c.
EDINBURGH, 10th December 1889.

Districts containing Parliamentary and Royal Burghs are printed in capitals, thus:—EDINBURGH. Districts containing of 2000 Inhabitants and upwards are printed in small capitals, thus:—CARLUKE.

N.B.—An asterisk “*” is prefixed to those Districts which comprise one or more Parishes or parts of Parishes, and the parent parts of these Districts will be found at page 454.

A dagger “†” is prefixed to those Districts which consist of only a part of a Parish of the same name.

		Buittle, 859	Clatt, 180	
		Bunkle and Preston, 728	Cleish, 460	

* The actual number of Districts is 1048—many Parishes and Burghs having been divided into two or more Districts for the purpose of Registration. Thus Edinburgh and Glasgow, to each of which only a single number is assigned in the Tables, consist of 8 and 14 Districts respectively. In forming the alphabetical arrangement the principle adopted has been to place compound names in the order in which they are pronounced.

Crossmichael, 863	Dunnet, 36	Forglen, 154	Hawick, 789	Kilchrenan, 517
Croy & Dalcross, 94	Dunnichen, 283	Forgue, 194	Heriot, 688	Kilconquhar, 436
Cruden, 185	Dunning, 350	Forres, 137	Hobkirk, 790	Kilcreggan, 502
Cullen, 150	Dunnottar, 255	Fort-Augustus (or Abertarf), 92	Hoddum, 829	Kildalton & Oa, 541
Culross, 343	Dunoon, 510	Forteviot, 354	Holm & Paplay, 19	Kildonan, 52
